## How to Use Your Glove

[Bluetooth](#)[Stun Gun](#)[Uses](#)

The arm component of the glove (as the glove dimensions reach from the middle of the fingers to the elbow of the arm) contains most of the electronic components such as the battery, GPS, and Bluetooth. All of these would be assembled using integrated circuits on a PCB around the arm. On top of the hand will be the stun gun circuitry which will connect to metal electrodes on top of the glove so when the user punches an attacker, it triggers the stun gun circuit in the glove, which sends the charge through the cable out the electrodes and shocks the attacker on contact. The design works such that when the user feels unsafe, she can press a button on the side of the glove, which would charge the stun gun circuit and notify her five prechosen contacts that she feels unsafe. Then when she punches an attacker, this will cause the stun gun circuit to discharge, shocking the attacker and notifying the police. The design stands apart from competitors as it combines many offensive and defensive features.
